

125 - 412 - 660

ADDITIONAL INFORMATION

Technical Data Sheet

125 Extender Base (PLW / PNP / NPP)

125 Extender Base is a clear plastisol base. One of its main properties is that it flattens the fibers on the garment and creates a very smooth surface. This base shouldn't be used to print flock, caviar beads, and foil, nor should it be used as a mixing base for glitter and metallic powders. 125 Extender Base has two main uses:

- *When printing on high elastic garments, 125 should be preferred over 120 Flash White or 121 Super Flash White. This also gives the print a very soft hand. However, this is only suitable for light colored garments. In case the garment has a dark color, 125 Extender Base should be combined with 120 Flash White or 121 Super Flash White at desired amounts.*
- *125 Extender Base can also be used for increasing the amount of plastisol colors to decrease the cost. So that the color won't lose its properties, not more than 15-20% by weight of 125 Extender Base should be mixed into the colors. This is mostly suitable for light colored garments.*

PLW-412 Scarlet

PLW-412 Scarlet is one of the highest opaque red shades in the industry. It is suitable only for dark colored garments. However, when printing on light colored garments, must be mixed with 10-20% (by weight) PLW-125 Extender Base. PLW-412 Scarlet has low washing and abrasion fastnesses.

PLW-660 Special Navy Blue

PLW-660 Special Navy Blue is an extra opaque navy blue plastisol ink. This color should only be used when a navy blue shade will be printed on a white underbase and the finished print will be heat pressed.
